Famoco OS FX205SE,1 v1.9.1 public Release Note

This is a maintenance release containing updates and fixes

Release build date : Dec 7, 2023   Release name : FX205SE,1_v1.9.1

Topic	Subject	Details
Improvement	Improve camera focus speed	In some situation the focus speed could be improved
Feature	USB device filtering	Adding a system property to limit the USB devices that can be connected to the Famoco device, or to forbid a specific USB device to be enumerated on the Famoco device. This feature introduces two blacklists (and maybe some white list in the future) containing the USB port to blacklist and a vendor ID product ID couple to block. This feature is manageable as of MDM release 2.22 but not open to end customers because of its setup complexity. Please contact support should you need this feature
Bugfix	Fix random NFC stack crash on boot	On rare occasions Contactless interface doesn't work at boot
Bugfix	high power consumption	In version FX205SE,1_v1.8.0, standby current is too high, leading to a unnecessarily fast discharge in standby mode
Security improvement	Intent Firewall customization	Famoco OS uses an Android feature called intent firewall which allows for the enforcement of intents based on rules defined in XML files; see ▲ Android Intent Firewall - Carter Yagemann Because of the risks associated to allowing customers to modify it, famoco provides a default set of rules and can issue new ones for specific requests; please contact support if you believe you need it.
Security improvement	Settings app disabling	Improve security of the native Android Settings application
Component update	Update FL to v3.13.1	See Famoco Layer 3.13.1 release note
